

* Difference Between Primary Data & Secondary Data

Primary Data

Secondary Data.

1) Primary data are those that are collected for the first time.

Secondary data refer to those data that have been collected by some other person.

2) These are in the form of raw materials.

These are in the finished form.

3) It is Original because these are collected by the investigator for the first time.

It is not Original because someone else has collected these for his own purpose.

4) It is more accurate and reliable.

It is less accurate and less reliable.

5) Primary data is called real-time data.

While this is not real-time data, It is ~~related~~ related to the past.

6) There is also difficulty in collecting data.

While there is no difficulty in collecting data.
